Faculty of Computer Science and Mathematics

Lab Exercise 3

Name:	MUHAMMAD IHSAN HAFIZI BIN MOHD ZAHARI
Matric Num:	S79653

Overview:

This in-class exercise extends Lab Exercise 3. You will apply block and inline elements, for page organization, HTML entities, HTML5 input types and attributes (placeholder, autofocus, required), <datalist> and the <output> element to solve a realistic problem.

There are two problems. Your lecturer will assign one problem to you, or you may be asked to complete both.

Learning Outcomes

1. Differentiate and correctly use block and inline elements.
2. Organize a web page into sections using elements.
3. Apply HTML entities to display reserved and special characters.
4. Implement HTML5 input types, input attributes and <datalist> in a form.
5. Use the <output> element to display a calculated result dynamically.

Best of luck!

Problem A: Campus Bakery Online Order Page

A small bakery on campus wants customers to place pre-orders online. Customers must be able to see the price list, fill in an order form, and see the total price instantly before submitting the order. Build the page using HTML only (no CSS). You may choose any bakery name, products and prices.

Instructions

Create a file named lab3_ExerA.html that contains the following:

1. Page Structure

- Use `<!DOCTYPE html>` and organize the whole page using five `<div>` elements with the ids header, nav, content, sidebar and footer.

2. Header and Navigation

- In the header, display the bakery name using `<h1>`, and use a `<span>` inside the `<h1>` for a short slogan.
- In the nav, create at least three inline links (`<a>`) separated by " | ".

3. Block and Inline Elements

- In the content section, write an introduction paragraph (`<p>`) that contains at least three different inline elements, e.g. `<strong>`, `<em>`, `<span>` and `<a>`.
- Use at least three different block elements in the page (e.g. `<h2>`, `<p>`, `<ul>`, `<div>`).

4. HTML Entities (Sidebar and Footer)

- In the sidebar, show a "Price List" using a list. Use at least four different entities in the page, for example:
  - `®` for the brand name (e.g. CampusBake®)
  - `<` or `>` (e.g. Orders > 10 pieces get a free drink)
  - ` `, `£` or `€`, and `©` in the footer

5. Order Form (HTML5 Form Elements)

Inside a `<div>` in the content section, create an order form that contains:

- Customer name: text input with placeholder, required and autofocus.
- Phone number (`type="tel"`) and e-mail (`type="email"`), both required.
- Pick-up date (`type="date"`) and pick-up time (`type="time"`).
- Flavour: an input linked to a `<datalist>` with at least 4 flavours.
- Icing colour (`type="color"`) and sweetness level using a range slider (`min="1"`, `max="5"`, `step="1"`).
- A submit button.

6. Price Calculator (<output>)

- Add two number inputs: Cupcakes (RM 3.00 each) and Cake Slices (RM 5.00 each), each with `min="0"` and `value="0"`.
- Use the form oninput attribute and an `<output>` element (with the correct name and for attributes) to show the total price automatically, e.g. 2 cupcakes + 1 slice = 11.

7. Comments

- Use comments (`<!-- ... -->`) to explain each section of your code.

Testing

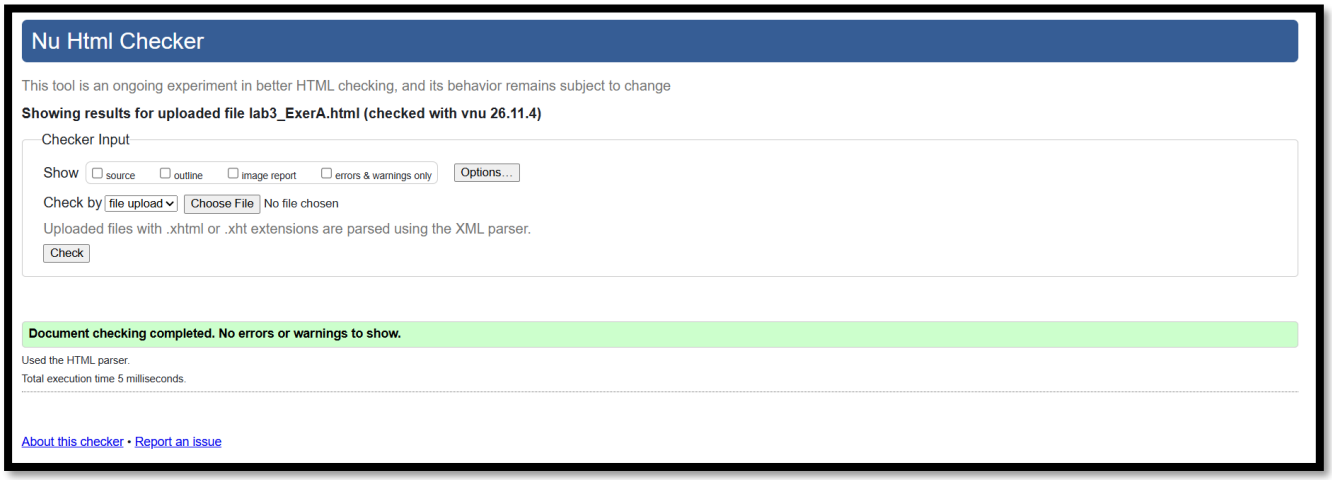

- Click Submit with all fields empty. What happens? Then enter "myemail" in the e-mail field and submit again. Write your observations as a comment at the end of your file.
- Validate the file at https://validator.w3.org (Validate by File Upload).

Submission

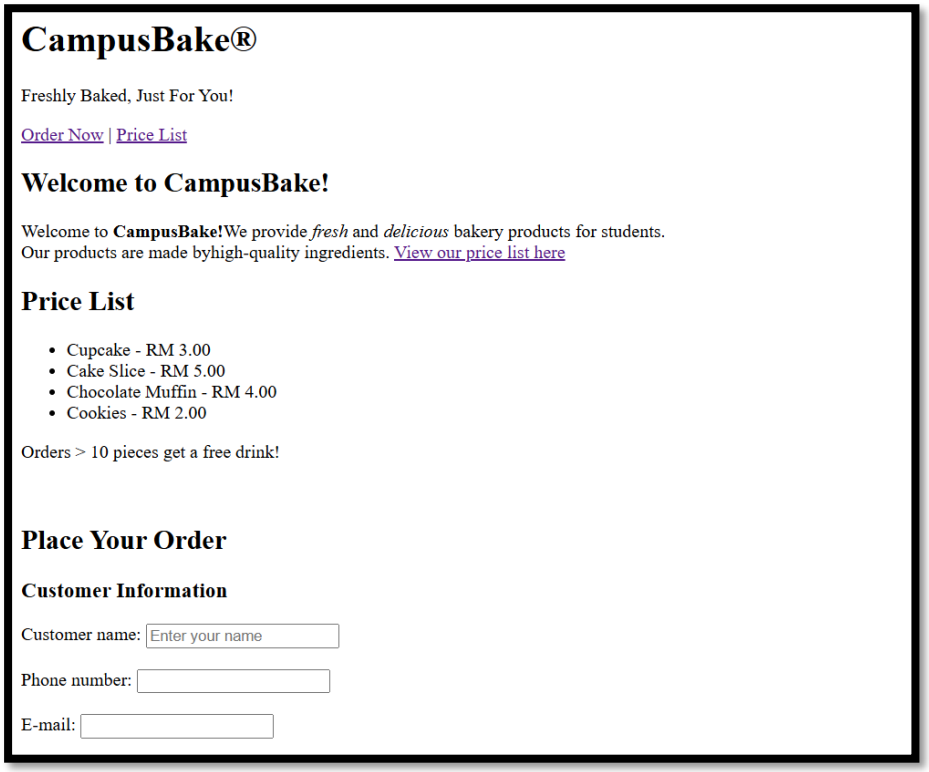

Save the file as lab3_ExerA.html, validate it at `https://validator.w3.org` (Validate by File Upload), and submit it (Submit lab3_ExerA.html and Screenshot of validation) through Github > Update your index.html (if you hosting your lab in Github pages)

Problem B: Ticket Booking (Debugging and Extend)

The campus cinema club built a ticket booking page, but users have reported several problems: the e-mail field accepts anything, the movie suggestions do not appear, the slider behaves strangely and the total shows "23" when the user books 2 adult and 3 child tickets. The copyright symbol also does not display. Find and fix the errors, then extend the page.

Given Code

```
 1  <!DOCTYPE>
 2  <html lang="en">
 3  <head>
 4      <meta charset="utf-8">
 5      <title>Ticket Booking</title>
 6  </head>
 7  <body>
 8  <div id="header">
 9      <h1>e-Ticket <span>Your Campus Cinema</h1></span>
10  </div>
11  <span id="content">
12      <h2>Book Your Ticket</h2>
13      <p>Promotion: tickets < RM10 for students &amp staff!</p>
14      <form action="booking.php" oninput="total.value = adult.value +
child.value">
15          <label for="name">Name:</label>
16          <input type="text" id="name" name="name" placeholder="Enter your
name" required autofocus><br>
17          <label for="email">E-mail:</label>
18          <input type="emial" id="email" name="email"><br>
19          <label for="date">Show date:</label>
20          <input type="date" id="date" name="date"><br>
21          <label for="movie">Movie:</label>
22          <input id="movie" name="movie" list="movies"><br>
23          <datalist id="movielist">
24              <option value="Space Rangers">
25              <option value="Kampung Comedy">
26          </datalist>
27          <label for="adult">Adult tickets:</label>
28          <input type="number" id="adult" name="adult" value="0"><br>
29          <label for="child">Child tickets:</label>
30          <input type="number" id="child" name="child" value="0"><br>
31          <label for="rating">Rate our service:</label>
32          <input type="range" id="rating" name="rating" min="5" max="1"><br>
33          Total tickets: <output name="total" for="adult kid"></output><br>
34          <input type="submit" value="Book Now">
35      </form>
36  </span>
37  <div id="footer">
38      <p>&Copy; 2026 CineKampus. All rights reserved.</p>
39  </div>
40  </body>
41  </html>54  </body>
55  </html>
```

Instructions

Part 1. Find and Fix the Errors

1. Copy the given code into a new file named lab3_ExerB.html.

2. Identify and correct all errors. At the top of the `<body>`, write an HTML comment listing each error and the line number, e.g. `<!-- Error 1 (Line 1): missing <!DOCTYPE html> -->`.

3. Test the page: the movie suggestions must appear, the e-mail field must reject "myemail", and 2 adult + 3 child tickets must show a total of 5.

4. Validate your corrected file at `https://validator.w3.org`. Your final page must show "No errors or warnings to show".

Part 2. Extend the Existing Page

5. Add a `<div id="sidebar">` titled "Now Showing" that lists at least 3 movies. Each item must use inline elements: the title in `<strong>`, the age rating in `<span>` and a trailer link using <a>.

6. Add a phone number input (`type="tel"`) with a placeholder and required, and a show time input `(type="time").`

7. Add a second `<output name="price">` that shows the total price, where an adult ticket is RM 12 and a child ticket is RM 8 (e.g. 2 adults + 3 children = 48).

8. In the footer, add the text "e-Ticket® – Campus Cinema < RM10 every Tuesday" using the correct entities for ®, < and &.

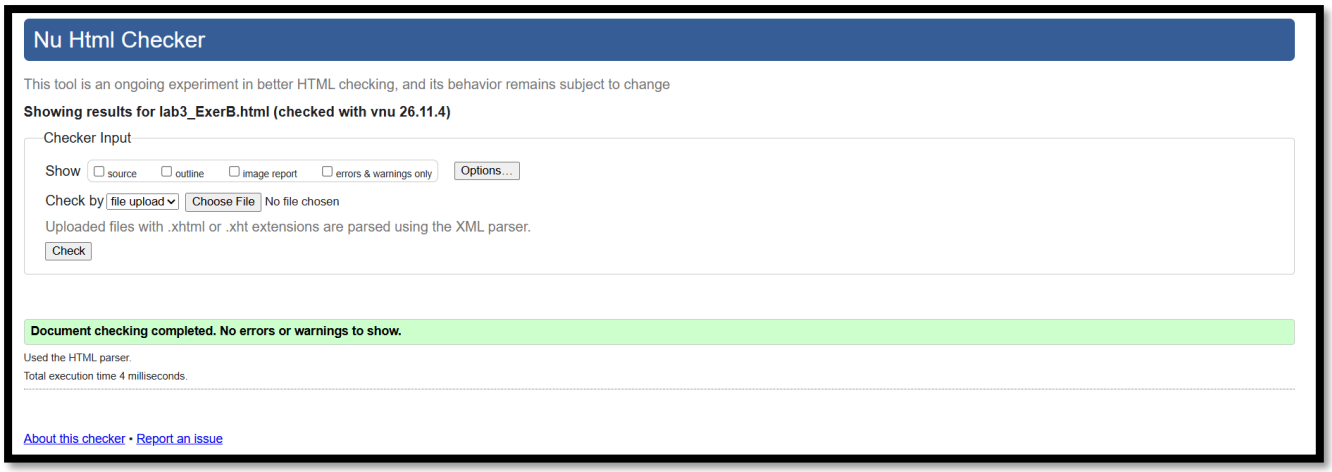

9. Use comments to explain each new section of your code.

Submission

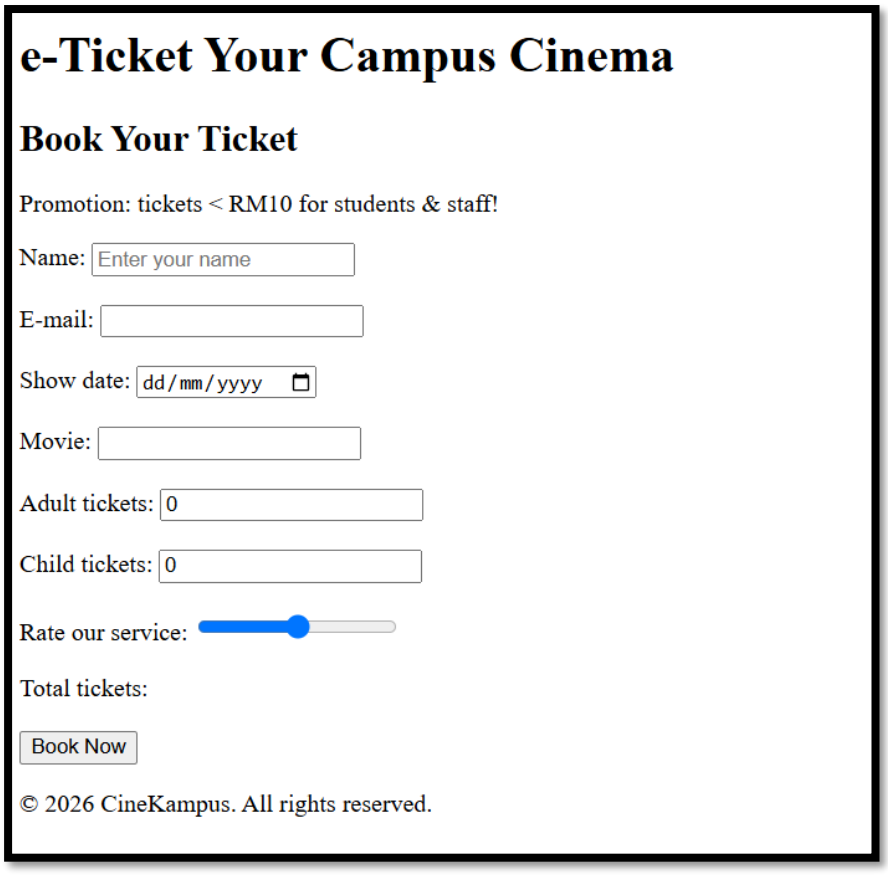

Save the file as lab3_ExerB.html, validate it at `https://validator.w3.org` (Validate by File Upload), and submit it (Submit lab3_ExerB.html and Screenshot of validation) through Github
